SUMMARY

Full-stack software engineer and Summa Cum Laude CS graduate (3.9 GPA) from Colorado School of Mines with hands-on experience in React, Next.js, Node.js, Python, and machine learning. Proven ability to ship end-to-end web applications — including a live habit-tracking platform with user auth and data visualization, and a production statistics site for active game players. Eager to contribute strong CS fundamentals and a self-driven approach to building and iterating on production software.

EDUCATION

Colorado School of Mines | Golden, CO

Aug 2020 – May 2024

B.S., Computer Science — Summa Cum Laude — GPA: 3.9 / 4.0

EXPERIENCE

Software Engineer Intern | Pie Insurance | Denver, CO

May 2022 – July 2022

- Saved an estimated 2,000+ hours of annual manual labor by designing and shipping an internal CSV data-validation and database-upload pipeline, eliminating manual format checks through automated constraint validation before ingestion.
 - Collaborated within an Agile sprint cycle alongside a full-time engineering team — daily standups, code reviews, and iterative releases — delivering a working tool from requirements to deployment within a 10-week window.
-

PROJECTS

Quote Discovery & Sharing Platform | Personal Project | React, Express.js, MongoDB

March 2026 – Present

- Built a full-stack quote discovery and sharing platform using React, Express.js, and MongoDB with JWT-based user authentication, personal quote collections, and a social feed for creating and sharing quotes.
- Designed RESTful API endpoints supporting full CRUD operations on quotes and user profiles, with search and filter functionality by author, topic, and popularity — deployed and live.

Habit Tracker | Personal Project | Next.js, React, Vercel

May 2025 – Present

- Built and deployed a full-stack habit-tracking web app in Next.js with user authentication, persistent daily habit logging, streak tracking, and progress analytics — live at habit-tracker-nu-flame.vercel.app.
- Implemented interactive data visualization charts for habit completion trends and a responsive UI with real-time state updates reflecting streaks and daily check-ins without page reloads.

TFT Double-Up Statistics Platform | Personal Project | React, Node.js, Express, MongoDB

February 2024 – March 2025

- Built a full-stack web app using React, Express.js, and MongoDB that surfaces live match stats and rankings for TFT Double Up mode — a game mode with no dedicated stats site at launch.
- Designed a REST API backend that queries the Riot Games API, normalizes match data, and caches results in MongoDB to minimize redundant API calls and improve response times.

AI Spotify Playlist Generator | Class Group Project | Python, OpenAI API, Spotify API

September 2023 – December 2023

- Integrated GPT-3.5 and the Spotify Web API (OAuth 2.0) to generate personalized playlists deposited directly into a user's Spotify account — handled full OAuth flow, token management, and prompt-to-track-URI mapping.
-

SKILLS

Languages: Python, JavaScript, TypeScript, C++, Java, SQL, HTML, CSS

Frameworks & Libraries: React, Next.js, Node.js, Express.js, PyTorch, NumPy, scikit-learn

Databases & Tools: MongoDB, PostgreSQL, Git, GitHub, REST APIs, Agile/Scrum, Linux, Vercel

Concepts: Machine Learning, Reinforcement Learning, Full-Stack Development, Data Structures & Algorithms
